## **Docker CLI Installation**

```
Command Prompt
Microsoft Windows [Version 10.0.19044.1766]
(c) Microsoft Corporation. All rights reserved.
C:\Users\ADMIN>docker
Usage: docker [OPTIONS] COMMAND
A self-sufficient runtime for containers
Options:
                                                                      Location of client config files (default "C:\\Users\\ADMIN\\.docker")
Name of the context to use to connect to the
                --config string
                                                                     Name of the context to use to connect to the daemon (overrides DOCKER_HOST env var and default context set with "docker context use") Enable debug mode Daemon socket(s) to connect to Set the logging level ("debug" |"info" | "warn" | "error" | "fatal") (default "info") Use TLS; implied by --tlsverify Trust certs signed only by this CA (default "C:\\Users\\ADMIN\\.docker\\ca.pem") Path to TLS certificate file (default "C:\\Users\\ADMIN\\.docker\\cert.pem") Path to TLS key file (default "C:\\Users\\ADMIN\\.docker\\key.pem") Use TLS and verify the remote Print version information and quit
     -c, --context string
     -D, --debug
-H, --host list
-1, --log-level string
               --tls
--tlscacert string
               -- tlscert string
               --tlskey string
               --tlsverify
      -v, --version
```

## **Docker Desktop**
